

Lexicon Storage Details

- Repository: Zenodo
- Repository name: Hindi_Hate_Lexicon
- Data identification number: **10.5281/zenodo.17938022**
- Direct URL to data: **<https://doi.org/10.5281/zenodo.17938022>**
- **Citation:** Sawant, M., Caton, S., & Qureshi, M. A. (2025). Hindi_Hate_Lexicon (v1.0) [Data set]. Zenodo. <https://doi.org/10.5281/zenodo.17938022>
- **Explicit FAIR mapping:** The dataset adheres to the FAIR principles by providing globally unique persistent identifiers, open, downloadable formats (CSV), and offering detailed documentation that enables reuse.

Lexicon Type:

- **Data Type:** Structured textual data (lexicon) consisting of Hindi lexical terms related to hate speech, organised into categories: (A) Explicit Target Groups, (B) Implicit Target, (C) Explicit Target Personalities, along with a lexicon of Hindi swear words. The data is processed and categorised.
- **Data Format:** Tabular data stored in CSV format, consisting of a single column and encoded in UTF-8.

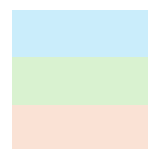

Significance and Reusability of the Developed Lexicon

The value of this lexicon and its potential for reuse are as follows:

- **Manually curated:** Addresses the scarcity of Devanagari Hindi resources by providing a manually curated, open-source Hindi hate-speech lexicon in the Devanagari script, an area that has received limited attention. The lexicon supports research on hate speech, offensive and aggressive language, cyberbullying, misogyny, and toxic speech across social media platforms such as Facebook, X (formerly Twitter), and Instagram, for both long-form texts (e.g., blogs) and short texts (e.g., tweets), specifically targeting Hindi Devanagari script.
- **Linguistic & Contextual Features:** Establishes a comprehensive analytical resource for examining linguistic and contextual features of hate speech in the Hindi Devanagari script and for supporting the development of computational tools to mitigate its spread on social media. This supports future researchers in prioritising and conducting more detailed analyses of critical hate-speech types.
- **Targets of hate speech:** Enables the analysis of underlying drivers and the identification of key targets of hate speech by employing lexicon subcategories of explicit targets, as well as lexicon subcategories of implicit targets in cases where the source or target of hate speech is not explicitly identifiable or where tweets are sarcastic in nature. Moreover, this analysis is not limited to hate speech; the lexicon can be applied in a corpus-agnostic manner to any Hindi text corpus to identify and highlight the presence of such categories.
- **Annotator Training:** Strengthens the training and evaluation of annotators by exposing culturally grounded targets of hate speech, thereby enhancing traditional annotation guidelines that have previously been limited to theoretical definitions of hate speech and its types. This is particularly important in multilingual settings, where the scarcity of expert annotators poses a significant challenge.
- **Annotator Disagreement:** Identifies sources of disagreement among annotators by comparing the key lexical terms (e.g., political, religious) that influenced annotators' decisions across different tweets for each annotator during the annotation of broader Hindi NLP datasets. This analysis can be supported by appropriate NLP and explainable AI (XAI) methods to better understand annotators' judgments.
- **LLM-generated lexicons:** Functions as training data for developing LLM-generated lexicons and as a benchmark for evaluating such lexicons in the Hindi hate speech domain using the Devanagari script, which remains underexplored. It further advances research on LLM-based lexical resources for Hindi.

Table 1: Repository README- File Structure & Descriptions for Hindi HASOC 2019 dataset

File Names	Column header	Devanagiri (D)	Roman Hindi (R)	Total Size (T) T=D+R	Distinct Terms (D) D<T	SubCategory
Implicit_Target:Implicit_Personalised_Political_Slurs.csv	Implicit_Personalised_Political_Slurs	15	1	16	12	Implicit Personalised Political Slurs
Implicit_Target:Implicit_Political_Groups_Slurs.csv	Implicit_Political_Group_Slurs	16	1	17	16	Implicit Political Group Slurs
Implicit_Target:Implicit_Hindus.csv	Implicit_Hindus	27	4	31	29	Implicit Hindus
